

AMENDMENT TO THE CLAIMS:

This listing of claims will replace all prior version and listings of claims in the application:

We claim:

1. (Canceled)
2. (Canceled)
3. (Canceled)
4. (Canceled)
5. (Canceled)
6. (Canceled)
7. (Canceled)
8. (Canceled)
9. (Currently Amended) A self-referencing colorimetric resonant optical biosensor

comprising:

- (a) one or more liquid-holding vessels comprising a colorimetric resonant optical biosensor as a surface; and
- (b) one or more specific binding substances immobilized on a first portion of the colorimetric resonant optical biosensor of each liquid-holding vessel forming a reaction surface, and no specific binding substances immobilized on a second portion of the colorimetric resonant optical biosensor of each liquid-holding vessel forming a reference surface, wherein the biosensor comprises two or more reaction surfaces in each liquid holding vessel and two or more reference surfaces in each liquid holding vessel.

10. (Canceled)
11. (Original) The self-referencing colorimetric resonant optical biosensor of claim 9, wherein when the biosensor is illuminated a resonant grating effect is produced on the reflected radiation spectrum and wherein the depth and period of a grating of the biosensor are less than a wavelength of the resonant grating effect.

12. (Original) The self-referencing colorimetric resonant optical biosensor of claim 9, wherein a narrow band of optical wavelengths is reflected from the biosensor when the biosensor is illuminated with a broad band of optical wavelengths.
13. (Original) The self-referencing colorimetric resonant optical biosensor of claim 9, wherein the one or more specific binding substances are bound to their specific binding partners.
14. (Original) The self-referencing colorimetric resonant optical biosensor of claim 9, wherein the liquid-holding vessel is selected from the group consisting of a microtiter plate well, a test tube, a Petri dish and a microfluidic channel.
15. (Canceled)
16. (Canceled)
17. (Canceled)
18. (Withdrawn) A method of detecting the binding of one or more specific binding substances to their respective binding partners in a self-referencing colorimetric resonant optical biosensor of claim 9 comprising:
- (a) applying one or more specific binding partners in a reaction volume to the one or more liquid holding vessels of claim 9;
 - (b) illuminating the reaction surfaces and the reference surfaces with light;
 - (b) detecting a maxima in reflected wavelength, or a minima in transmitted wavelength of light from the reaction surfaces and the reference surfaces; and
 - (c) comparing the maxima or minima of the one or more reference surfaces to the maxima or minima from the one or more reaction surfaces;
- wherein the binding of one or more specific binding substances to their respective binding partners is detected.
19. (Canceled)
20. (Withdrawn) A method of detecting activity of an enzyme in a self-referencing colorimetric resonant optical biosensor of claim 9 comprising:
- (a) applying one or more enzymes in a reaction volume to the one or more liquid holding vessels of claim 9;

- (b) illuminating the one or more reaction surfaces and the one or more reference surfaces with light;
 - (c) detecting a maxima in reflected wavelength, or a minima in transmitted wavelength of light from the one or more reaction surfaces and the one or more reference surfaces; and
 - (d) comparing the maxima or minima of the one or more reference surfaces to the maxima or minima from the one or more reaction surfaces;
- wherein the activity of an enzyme is detected.
21. (Canceled)
22. (Withdrawn) A method of detecting inhibition activity of one or more molecules against one or more enzymes or specific binding partners in a self-referencing colorimetric resonant optical biosensor of claim 9 comprising:
- (a) applying one or more molecules suspected of having inhibition activity in a reaction volume to the one or more liquid holding vessels of claim 9;
 - (b) applying one or more enzymes or specific binding partners in a reaction volume to the one or more liquid holding vessels;
 - (c) illuminating the one or more reaction surfaces and the one or more reference surfaces with light;
 - (d) detecting a maxima in reflected wavelength, or a minima in transmitted wavelength of light from the one or more reaction surfaces and the one or more reference surfaces; and
 - (e) comparing the maxima or minima of the one or more reference surfaces to the maxima or minima from the one or more reaction surfaces;
- wherein the inhibition activity of one or more molecules is detected.
